

The figure displays the error norm of the numerical solution over time for various methods. The x-axis represents 'Elapsed Time (s)' from 0 to 2500, and the y-axis represents the 'Error Norm' from 0.0000 to 0.0010. A horizontal red line at 0.0005 indicates the tolerance level. The methods compared are: C++ (dark blue), C# (light blue), Fortran (green), Java (orange), Julia (purple), MATLAB (brown), Mathematica (pink), Python (grey), R (yellow), and SciPy (dark green). Most methods converge to the tolerance level quickly, with some showing initial spikes or deep drops before stabilizing. The C++ method shows a notable initial spike and a deep drop around 1500s before stabilizing.
