

The graph displays the number of connections for eight different IFACEs over a 6000-second period. The IFACE: eno1 (red line) is the only one showing a high number of connections, with several peaks reaching approximately 90-100 connections. The other IFACEs (400gp1, br-363df, docker0, eno2, enx0234, lo, and veth619) maintain a connection count near zero throughout the entire duration.
