

The graph displays the network traffic (pps) for several interfaces over a 4500-second period. The 'veth3f4' interface (yellow line) is the only one showing significant activity, with multiple sharp spikes reaching up to 100 pps. The other interfaces, including '100gp1', '100gp2', '400gp1', 'docker0', 'eno1', 'enp111s', 'enxbe3a', 'lo', and 'veth3f4', all remain at or near zero pps throughout the entire duration.
