

The graph displays the number of connections for ten different network interfaces over an 800-second period. The 'veth0b8' interface is the only one showing significant activity, with multiple spikes reaching a maximum of 50 connections. The other interfaces, including '100gp1', '100gp2', '400gp1', 'docker0', 'eno1', 'enp111s', 'enxbe3a', 'lo', and 'veth0b8', maintain a connection count near zero throughout the entire duration.
