

The graph displays the probability of finding the system in state $|0\rangle$ over time. The x-axis represents 'Elapsed Time (s)' from 0 to 450, and the y-axis represents 'Probability' from 0.00 to 1.00. The plot shows a series of sharp peaks and troughs, indicating oscillatory behavior. The highest peak reaches a probability of 1.00 at approximately 225 seconds.
