

The graph displays the probability of finding the system in state  $|0\rangle$  as a function of elapsed time. The x-axis represents 'Elapsed Time (s)' from 0 to 175, and the y-axis represents 'Probability' from 0.00 to 1.00. The purple line shows a series of sharp peaks and troughs, indicating periodic behavior. A horizontal olive line is drawn at a probability of approximately 0.4, and a vertical olive line is drawn at an elapsed time of approximately 120 seconds, intersecting at a peak in the purple line.
