

The graph displays two periodic functions on a coordinate plane. The horizontal axis is marked with values 0, 20, 40, 60, and 80. A horizontal line serves as the equilibrium axis. The purple function oscillates with a higher amplitude than the olive green function. Both functions appear to have a period of approximately 20 units. The purple function reaches its maximum peaks at approximately x = 8, 18, 28, 32, 45, 48, 52, 65, 68, 75, 82, and 88. The olive green function reaches its maximum peaks at approximately x = 8, 18, 20, 28, 32, 45, 48, 52, 65, 68, 75, 82, and 88. The functions are out of phase, with the purple function leading the olive green function.
